ZHU LINGFEI

Los Angeles, CA | ztavel0505@gmail.com | lingfeiz@usc.edu

EDUCATION

University of Southern California (USC) — ***August 2026 - May 2028 (Expected)***
M.S. in Applied Data Science — *Los Angeles, CA*

Soochow University — ***September 2021 - May 2025***
B.S. in Information and Computing Science (Mathematical Sciences) — *Suzhou, China*
GPA: 3.62/4.0 | Rank: 12/59 | Outstanding Graduate

TECHNICAL SKILLS

Data Analytics & Visualization: MySQL, Database Management, Power BI, Excel, Tableau
Programming & AI: Python, C, MATLAB, AI/LLM Applications, Qwen2-VL, Gradio, API Integration
Digitalization & Product: Process Automation, Workflow Optimization, KPI Dashboards, Product Solution Development
Tools & Productivity: Microsoft Office, WPS Office, Feishu, XMind, Canva, Xiumi

PROFESSIONAL EXPERIENCE

Bosch Powertrain Systems Co., Ltd. — ***Nov 2025 – May 2026***
Manufacturing Digitalization / Operations Intern — *Wuxi, China*

- Supported **3 huge workshops** preparation and content integration by consolidating operational information and production-related data for team workshops and daily management.
- Proposed engineering perspectives and improvement recommendations during a new PDCA project cycle, contributing to project development and process optimization.
- Collected and consolidated operational data from **Databricks** databases and **CSV** files to support KPI reporting, dashboard development, and process analysis.
- Developed **7 electronic KPI reports and visual management boards** for office and shop-floor operations, including daily morning meeting dashboard, product review dashboard, and real-time CT monitoring dashboard, improving operational data visibility.
- Analyzed manual workflows and participated in the **digitalization and automation** of operational processes including an international automated material-calling system, reducing repetitive manual work via **KNIME, Automate, and Python, saving workers' time from 2 hours to almost 0 minute** a week.
- Collaborated with cross-functional teams to understand operational needs and translate business processes into practical digital solutions. Refined project presentation materials and PPT slides and coached an employee with little to no English proficiency to deliver the project results in English **within 7 days**; the project won **First Prize** in the competition.

Suzhou Yantu Education Technology Co., Ltd. — ***Mar 2025 - Apr 2025***
AIGC Development Intern — *Suzhou, China*

- Designed and implemented an end-to-end data processing pipeline for an AI-based English reading assessment system, using a company-internal corpus of exam-level English articles as the primary data source.
- Developed **automated workflows** for article difficulty assessment, reading-question generation, and structured solution generation, producing answers, explanations, vocabulary analysis, and complex-sentence analysis by **Coze**.
- Integrated **APIs** and custom code tools to support data processing and workflow execution, connecting multiple stages of the content-generation pipeline into a unified system.
- Conducted testing and error analysis on generated content and iteratively updated processing logic, workflows, and system components to improve output quality and reliability.

Suzhou Broadcasting System — ***Sep 2024 – Oct 2024***
Technology R&D Intern — *Suzhou, China*

- Rapidly learned and applied **Python**, **Linux**, **Qwen2-VL-7B**, and **Gradio** to develop AI-related applications.
- Deployed a **Multi-modal Large Language Model** locally and developed applications for image recognition and video keyword extraction.
- Built an interactive **Gradio** interface to visualize model outputs and support model interaction and testing.

Ernst & Young Hua Ming LLP — ***Jan 2024 – Feb 2024***
Data Analysis Intern — *Shanghai, China*

- Processed and analyzed historical business data using **Excel** and **Power BI**, creating **data visualizations and analytical reports**.
- Rapidly transferred existing Tableau knowledge to Power BI and independently applied the new tool to real-world assignments.
- Identified data-processing issues, communicated with mentors, and improved workflow efficiency through iterative problem solving.

RELATED PROJECT

Submersible Localization & Search-and-Rescue Modeling | MCM/ICM *2024*

• Built a probabilistic localization model using Particle Filtering to estimate submersible positions under uncertain environmental conditions, incorporating ocean currents, seawater density, and seabed topography.
• Developed a Bayesian search model to integrate new observations, update regional probabilities, and optimize search priorities and resource allocation.
• Conducted simulation and sensitivity analysis across the Ionian and Caribbean Seas to evaluate model performance and adaptability.
• Awarded **Meritorious Winner** in the Mathematical Contest in Modeling (MCM/ICM 2024).

SELECTED ACADEMIC & LEADERSHIP HIGHLIGHTS

Mathematical Contest in Modeling (MCM/ICM) — Meritorious Winner *2024*
National College Mathematics Competition (Mathematics A) — National Third Prize *2023*
NTU Statistics & Data Analysis Program — Jiangsu Provincial Government Scholarship | Nanyang Technological University *2023*
Columbia University Online Course — Numerical Models and Applications | Grade: A (88.80) *2024*
Student Union, Jingwen Academy, Soochow University — Director *2024*
